

TECHNIDATA, which celebrates its 30th anniversary this year, has just obtained ISO 27001 certification, attesting to its strong commitment to guaranteeing the IT security of its software solutions for medical laboratories.

Montbonnot, September 28th 2023

TECHNIDATA, the developer and distributor of software solutions for medical laboratories, is now ISO 27001 certified. This international standard defines the requirements for information security management systems, and provides guidelines for the establishment, implementation, maintenance, and continual improvement of such systems.

ISO 27001: a commitment to protecting health data

TECHNIDATA's ISO 27001 certification was awarded following a rigorous audit and evaluation process, and is recognition of the company's commitment to protecting information and guaranteeing the confidentiality and integrity of patient data in its software solutions. It also recognizes the efforts made in anticipating future regulatory changes.

"Being ISO 27001 certified proves that TECHNIDATA prioritizes data security, and attests to the significant investment we have made in cybersecurity in recent years. This new certification complements those we have held for many years, such as ISO 9001, ISO 13485 and ISO 13485 MDSAP, all of which are testament to the high standards and quality we strive for in the design and development of our software solutions", says Olivier De Korte, Managing Director of TECHNIDATA SAS.

ISO 27001 sets out the requirements for Information Security Management Systems (ISMS), and defines how organizations should manage and process information securely, by incorporating appropriate security controls. It is well-recognized as a reference that helps organizations both guard against multiple threats, and protect their information assets. ISO 27001 certification is all the more important for software publishers who, in addition to protecting their own information systems, must integrate security into the design and development of their products and services.

"The auditors examined the technical and human components of our Information Security Management System in great detail. In addition to the certificate itself, all our processes for compliance and continuous improvement have led TECHNIDATA to grow, and this certification is the result of teamwork at all levels of the company as well as with our partners and customers," adds Delphine Rosaz, Director of Central Services at TECHNIDATA SAS.

The first step in an ongoing process of continuous improvement

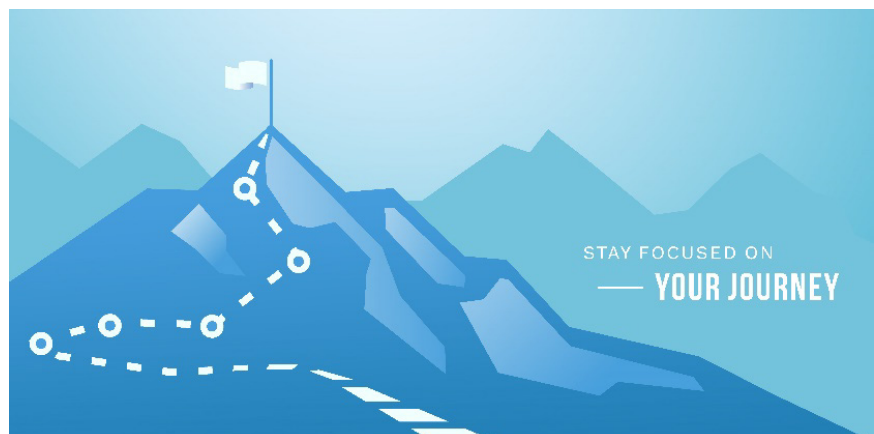

Maintaining this certification means meeting the standard's requirements over the long term, as well as demonstrating the company's capacity for continuous improvement. TECHNIDATA will carry out regular internal audits to maintain compliance, and will bring in external experts to perform periodic safety assessments of its products and processes.

"Gaining this certification was a team effort, which required all the company's employees to understand the issues and engage with the process every day. Our objectives are ambitious, and we will continue to develop and improve our practices", emphasizes Matthieu Dreyfus, Quality Manager and Data Protection Officer, TECHNIDATA SAS.

"ISO 27001 certification for information security is a benchmark that underlines our commitment to protecting data and strengthening the relationship of trust with our customers"
